```cpp
int main(){
        printf("hello,    world");
        return 0;
}
```

```cpp
#include<iostream>
#define Trace(m) cout<<#m"="<<(m)<<endl;
using namespace std;
//this is a basic cpp template
/*
 * output: print hello world.
latexbegin{
        This is embeded latex code.
        End!
}latexend
 */
int main(){
        cout<<"Hello       World."<<endl;
    return 0;
}
```

New method:

```cpp
1   #include<iostream>
2   #define Trace(m) cout<<#m"="<<(m)<<endl;
3   using namespace std;
4   //this is a basic cpp template
5   /*
6    * output: print hello world.
7   latexbegin{
8           This is embeded latex code.
9           End!
10  }latexend
11   */
12  int main(){
13          cout<<"Hello       World."<<endl;
14      return 0;
15  }
```

Algorithm 1: below the code

I'm refering to the Listing 2, end.

Figure 1: My autogenerated plot.

$f(x) = x^2 + 3x + 5$

Figure 2: dummy figure

Figure 3: A tmp jpg what?

Figure 4 show a tmp jpg.
Figure 3 show a tmp jpg.

$$f(x) = x^2 y = ax^2 + bx + c$$

$$1 + 2 = 3$$

$$1 + 2 = 3 \tag{1}$$
$$1 = 3 - 2 \tag{2}$$

Figure 4: A tmp jpg

$$f(x) = x^2 \tag{3}$$

$$g(x) = \frac{1}{x} \tag{4}$$

$$F(x) = \int_b^a \frac{1}{3} x^3 \tag{5}$$

$$IntF(x) = \int_a^b \frac{1}{3} x^3 \tag{6}$$

$$ClosedIntgral(x) = \oint_D F ds \tag{7}$$

$$c(x) = \frac{f(x)}{\frac{4}{3}} \tag{8}$$

$$\left(d(x) = \frac{1}{\sqrt{x}} \right) \tag{9}$$

$$\begin{bmatrix} 1 & 0 & 3 \\ 1 & 0 & 3 \\ 2 & 4 & \end{bmatrix} \tag{10}$$

$$\lambda^2 \alpha \beta \theta \tag{11}$$

adfadfadf
zverqwerqewraf

The formula is $f(x) = x^2$, for example.
